## **ANNUAL REPORT [CROP IMPROVEMENT]**

All the 8 research trials programmed for the year 2016-17 conveyed by the Project Coordinator, AICRP(S), Lucknow were laid down as per the technical programme and monitored by the team constituted by the Project Coordinator during Sept, 2016. The results of various trials received under crop improvement are detailed below:

### **1. Initial Varietal Trial Early (IVT-E)**

Nine test clones and two standards were evaluated in this trial for different cane yield and quality traits and data generated is appended in Table 1. The top three clones for cane yield in this trial were CoPb 13181(90.99 t/ha), CoH 13034 (89.01 t/ha) and CoPant 13231 (88.64 t/ha) that were comparable to high scoring standards Co 0238 (89.65 t/ha). The promising clones for stalk length were CoPant 13121, CoLk 13202, CoPant 13222 and Co 13034 while for stalk diameter and single cane weight were CoLk 13202, Co 13033, CoPant 13222. The standard Co 0238 was superior for these traits in comparison to test clones. For CCS (t/ha), three clones CoS 13231, CoPb 13181 and Co 13034 recorded higher values for this trait and are in comparison with both the standards. Sucrose (%) among test entries ranged from 14.87 -18.63. Two clones Cos 13231 (18.63%) and Co 13033 (17.63%) were better than CoJ 64 (17.22 %). Both these clones exhibited higher CCS % (10 months) than the best standard CoJ 64.

### **2. Advance Varietal Trial Early I Plant (AVT-E I Plant)**

In this trial, four test clones along with two standards were evaluated at for cane yield and quality traits (Table 2). None of the clone surpassed the best standard CO 0238 (91.19 t/ha) for cane yield. However, two clones namely Co 12027 (90.24 t/ha) and CoPant 12221(87.79 t/ha) were at par with Co 0238 for this trait. For quality traits viz: CCS % (10 months) and Sucrose % (10 months), and Pol % cane , two clones Co 12026 (17.46,11.68,12.85) and Co 12027(18.15,12.59,13.44) respectively reflected better/ comparable performance with both the standards.

### **3. Advance Varietal Trial Early II Plant (AVT-E II Plant)**

Among four test clones and two standards evaluated for cane yield and component traits in this trial, clone CoLk 11203 (88.92 t/ha) performed slightly better than Co 0238 (87.59

t/ha) and clone CoLk 11202(87.33 t/ha) was at par with this standard for cane yield. Both these clones showed desirable traits like stalk length and stalk diameter (Table 3). Clone CoLk 11203 ranked first for quality traits Sucrose at 10 month (18.0%), CCS% at 10 months (12.69) , Pol % cane ,10 month (14.28) and Fibre % 10 month (13.31) closely followed by CoLk 11202 for these traits, that is comparable to both the standards.

#### **4. Advance Varietal Trial Early Ratoon**

In advance varietal trial early ratoon, none of the test clones surpassed the best standard CO 0238 (83.24 t/ha) for cane yield. However clone CoLk 11203 (79.17 t/ha), was found at par closely followed by CoLk 11202 (75.35 t/ha).The cane characteristics like NMC (000/ha), stalk length (m), stalk diameter (cm) of clone CoLk 11203 were comparable with high yielding standard Co 0238 (Table 4). For quality traits, CoLk 11202 recorded the highest CCS (t/ha) (10.01) followed by CoLk 11201 (9.65) and CoLk 11203 (9.63) which is comparable to both the standards. The clone CoLk 11201 was found promising for sucrose per cent (19.37 %), Pol % cane (14.08 %) and CoH 11262 fo CCs % at harvest. (13.87 %) .

### **MID LATE TRIALS**

#### **5. Initial Varietal Trial Mid-Late (IVT-M/L)**

Thirteen test clones along with three standards were evaluated for cane yield and component traits in this trial. Among the test clones, the top four promising clones for cane yield were CoH 13263 (97.22 t/ha), CoLk 13204 (93.02 t/ha), CoPant 13224 (91.26 t/ha) and CoPb 13182 (91.78 t/ha.) that were superior to all the standards. Two clones Co 13035 (2.83 cm) and Co 13261 (2.68 cm) for stalk diameter and seven clones were superior for single cane weight than high scoring standards (Table 5).Six clones exhibited higher CCS (t/ha) than best standard CoPant 97222 (9.10 t/ha) and among the top three clones for CCS (t/ha) , CoPb 13182 (10.57) ranked first followed by CoH 13262 (10.45) and Co 13035 (10.12) .For sucrose and CCS %, clones CoH 13261 (19.31,13.58), Co 13036 (18.70, 13.13), Co 13035 (18.66, 13.10) and CoH 13262 (18.59 ,13.01) were top performers.

## **6. Advance Varietal Trial Mid-Late I Plant (AVT-M/L I Plant)**

This trial consisted of six test clones and three standards which were evaluated for cane yield and quality attributes. The data appended in table 6 showed that all test clones were superior to high yielding standards CoS 8436 (72.56) for this trait, however top three clones for cane yield were Co 12029 (86.40 t/ha), CoLk 12205 (84.28 t/ha) and CoPant 12226 (83.02 t/ha). High stalk length , stalk diameter and single cane weight were recorded for clone CoH 12263 (2.95 m,2.67 cm and 1.66 kg respectively) . Top three significantly superior clones for CCS% and sucrose per cent were CoPant 12226 (12.87, 18.52), CoLk 12205 (12.71, 18.25) and CoS 12232 (12.38,17.94). Similar trends were observed for CCS (t/ha) for these clones.Among test clones, Pol % cane and Fibre % was highest for clone CoLk 12205 which is comparable with standards CoS 8436 having Pol % cane (14.40) and Fibre % (14.46).

## **7. Advance Varietal Trial Mid-Late II Plant (AVT-M/L II Plant)**

In advance varietal trial mid-late II Plant, nine clones including six test and three standards were assessed for cane yield and quality parameters during 2016-17. The most promising clones for cane yield were CoS 11232 (89.45 t/ha) followed by CoLk 11206 (83.18 t/ha) and CoPb 11214(82.23 t/ha) and all these clones were significantly superior to the standards for cane yield t/ha.. The top three clones for single cane weight were Co 11027 (1.34 kg), CoH 11263 (1.23 kg) and CoLk 11204 (1.10 kg) (Table 7). For CCS (t/ha) clone CoLk 11204 ranked first (9.60) followed by CoS 11232 and CoPb 11214. All are comparable with Standard CoS 767 (8.40). All the test clones were comparable with standards for stalk diameter. The highest CCS % were recorded for CoPb 11214 (12.59) and clone CoH 11263 (12.29). CoH 11263 (17.90 %) recorded highest sucrose % among the test clones followed by CoPb 11214 (17.78) and CoLk 11204 (17.57).while standard CoPant 97222 recorded the highest Sucrose % at 12 months in this trial.

## **8. Advance Varietal Trial Mid-Late Ratoon (AVT-M/L Ratoon)**

Advance varietal trial mid-late ratoon conducted with six test clones along with three standards showed that cane yield among clones ranged from 57.30 t/ha to 76.47 t/ha. The promising clones for cane yield were CoPb 11214 (76.47 t/ha) followed by CoS 11232 (74.31 t/ha) and CoLk 11204 (70.46 t/ha) and were comparable with standards.

Two clones viz: Co 11027 (2.62, 1.27) and CoH 11263(2.90, 1.10) were found promising for cane diameter and single cane weight, while Co 11027 and CoS 11232 were superior for stalk length among the test clones.. Clones CoPb, 11214 (9.38), CoS 11232 (9.04) and CoLk 11204 (8.46) were found superior to CoS 767 (8.17) for CCS (t/ha). Clone CoLk 11204 excelled for CCS % (12.52 %) and other three clones CoPb 11214 , CoS 11232 and CoLk 11204 were comparable with all the standards (Table 8). None of the test clones surpassed the high scoring standards CoS 8436 and CoPant 97222 for Sucrose % at harvest. (Table 8). CCS % of the clone CoLk 11204 (12.52) was found to be comparable with the standards.

## **9. Fluff supply programme**

### **9.1 Sowing of Fluff**

From 2016 crossing programme, fluff of 62 cross combinations (Bips. PCs, GCs and Selfs) was received from SBI, Coimbatore in March and was sown in April, 2017. Thirty seven cross combinations exhibited good germination while 14 crosses did not germinated. Remaining eleven crosses showed 4-5% germination. Final count of seedlings (Table 9) and their survival in the field after transplanting will be communicated in due course of time.

### **9.2 Ratooning of seedling**

From fluff of 2015 hybridization programme, 8530 seedlings were transplanted in field during July, 2016 and were ratooned in December, 2016. These seedlings are showing good sprouting and shoot formation. Their cane characteristics and Brix data will be recorded in October-November, 2017 and selection will be made for their advancement to clonal stage I.

### **9.3 Clonal Stage 1**

During 2016, 433 clones selected from (C0) seedlings of different cross combinations were scored for different cane traits and brix using hand refractometer. The range of data recorded is appended in Table 10. Based on brix and cane traits 119 clones were selected and advanced to clonal stage I for further evaluation in 2016-17 crop season.

### **9.4 Clonal Stage II**

One hundred seventy two clones (172) advanced from Clonal stage I were evaluated in Clonal stage II for cane traits and brix during crop season 2016-17. Data revealed sufficient variability among and within cross combinations for these traits (Table 11). Seventeen clones

(17) were selected for earliness and thirty (30) for midlate maturity groups and put in preliminary yield trial (PYT) for their evaluation to cane yield, its components, quality traits and disease resistance in station trials.

## **10. Technical programme 2017 – 2018**

During 2017-2018, eight (8) research trials programmed for the year conveyed by the Project Coordinator, AICRP(S), Lucknow were laid down as per the technical programme in the month of Feb-March, 2017. All trials are in progress and data on germination, tiller count has been recorded. The various trials received under crop improvement are detailed below:

S. No.	AICRP(S)Trial	No of entries
1.	Initial Varietal trial- Early	7+3
2.	Advance Varietal Trial –Early I Plant	3+3
3.	Advance Varietal Trial –Early II Plant	4+2
4.	Advance Varietal Trial – Early Ratoon	4+2
5.	Initial Varietal Trial-Mid late	13+4
6.	Advance Varietal Trial – Mid late I Plant	5+4
7.	Advance Varietal Trial – Mid late II Plant	6+3
8.	Advance Varietal Trial – Mid late Ratoon	6+3

### **ZVT Multiplication**

Cane seed of 10 early and 11 mid/late clones as per proceedings of annual group meeting of AICRP(S) at VSI, Pune, 2016, was collected from SBI, Regional centre, Karnal and has been planted for their multiplication except one clone i.e CoS 15231..
