Index

Sr.No.	Name of Experiment	Page No.
1. AS 61	Optimizing irrigation schedule in sugarcane under different planting methods	06
2. AS 63	Plant geometry in relation to mechanization in sugarcane	27
3. AS 64	Response of sugarcane to different plant nutrients in varied agro ecological situations	47

1. SEASONAL FEATURE AND CROP CONDITION

YEAR: 2011-12

RAINFALL:-

The monsoon commenced from 4th week of May (22nd std week) at Navsari. The total rainfall received during the season was 1597.2 mm. in 65 days. The monsoon withdrawn during the third week of September-2011. The total rainfall received was slightly higher than average (1400.mm.)

TEMPERATURE:-

The highest maximum temperature was recorded during the month of March 2011 (37.6°C) and the lowest minimum temperature was recorded in the month of January 2012 (11.5°C) at Navsari.

CROP CONDITION:-

In general weather parameters *viz.* Temperature (Maxi. and mini.), and relative humidity, remained comparatively favorable for normal growth of sugarcane crop. However, due to higher rainfall water logging was observed in lowland plots. Hence early flowering was observed in many varieties as such crop yield remained some what low than the non flowering crops.

The mean weekly meteorological data recorded during the reporting year (2011-12) at Navsari are given in Table: A.

Table: A The meteorological data recorded at Regional Sugarcane Research Station, N.A.U., Navsari for the year 2011-2012.

Std. Week No.	Meteorolo gical weeks	Temperature C °		Rain- Fall (mm)	No. of rainy days	Relative Humidity %

FORM – B

Name of the Coordinated Project: All India Coordinated Research Project on Sugarcane

Discipline : Agronomy

State : Gujarat

Location : Navsari

Year : 2011-2012

Zone : Peninsular

Trial series : AS-61 Optimizing irrigation schedule in sugarcane under different planting methods (For tropical region)

General Information about the experiment:

1. **Design of the experiment** : R.B.D. (Factorial)

2. **Number of treatments** : 9

Treatment:

For Tropical region:

i. Planting method (P) : 3

P₁- Conventional planting (at 90 cm row spacing)

P₂- Paired row planting (at 30:150 cm row spacing)

P₃ - Paired cum trench planting (at 30:150 cm row spacing)

ii. Irrigation schedule (IW/CPE ratio): 3 **IW=80 mm**

I₁- 0.6

I₂- 0.9

I₃- 1.2

3. **Number of replications** : 3

Variety grown : CoN 05071

4. Plot size:

Distance between rows (cms) : As per treatments

a) Length of rows in gross plot : 10 m

b) No. of rows in gross plot : 8

c) Gross plot size : 10.00 m x 7.20 m

d) Length of rows in net plot : 8m

e) No. of rows in net plot : 8

f) Net plot size : 8.00 m x 5.40 m

5. **Date of planting** : 12-01-2011

6. **Date of Transplanting** : Not applicable

7. **Date of harvesting** : 25-01-2012

8. **Previous Crop grown** : T.P. paddy

9. **Soil type** : Heavy black soil

- 10. pH value** : 7.75
- 11. Initial Soil Status at the time of planting :**
- | Nutrient | Values | Status |
|---|---------------|---------------|
| Available N (kg/ha) | 253.2 | Medium |
| Available P ₂ O ₅ (kg/ha) | 52.8 | Medium |
| Available K ₂ O (kg/ha) | 287.0 | High |
- 12. Fertilizer applied:**
- | Nutrient | Basal | Top dressing |
|-----------------|--------------|---------------------|
| N | 15 % | 85% (in 3 splits) |
| P | 100% | - |
| K | 100% | - |
- 13. No. of irrigations given** : As per treatment & as per table 1
- 14. Date of Irrigation** : Irrigation given as per daily and cumulative pan evaporation data as per annexure I
- 15. Number of weedings given** : 2 times
- 16. Other cultural operation measures adopted**
- | Interculturing | 145 DAP |
|-----------------------|------------------|
| Ridging | : 150 DAP |
- 17. Plant protection measures adopted** : Not applied
- 18. Damage to the crop due to pest and diseases** : No significant damage was observed due to various pests and diseases.
- 19. Is the experiment reliable** : Yes
- 20. Name of the Co-operators** : Ms. Darpana Patel
- 21. Signature of Scientist of In charge of the experiment** :
- 22. Name and Designation** : Mr. H.C. Patel
Asst. Research Scientist

Table: 1 Treatment wise number of irrigations with field water use efficiency (kg ha/mm)

Title: AS 61 Optimizing irrigation schedule in sugarcane under different planting methods (For tropical region)

Table 2 Mean data of Germination percentage (at 30 and 45 DAP) and tillers (at 90 DAP)

Treatment	Germination (%) at 30 days after planting	Germination (%) at 45 days after planting	Tillers/net plot at 90 days after planting
P ₁ I ₁	67.55	71.34	272.48
P ₁ I ₂	74.96	81.16	274.27
P ₁ I ₃	63.87	71.84	269.84
P ₂ I ₁	62.35	69.42	265.97
P ₂ I ₂	76.29	82.33	269.69
P ₂ I ₃	59.83	65.56	267.57
P ₃ I ₁	61.80	72.26	262.18
P ₃ I ₂	66.54	72.68	264.64
P ₃ I ₃	65.91	76.84	267.72

Results :-

Cane yield (t/ha) :-

The Results are given in Table 3a.

Planting method:-

There was no significant difference observed due to various planting methods. However, highest and lowest cane yield recorded with planting method P₃ and P₁.

Irrigation schedule (IW/CPE ratio):-

Significantly highest cane yield (134.08 t/ha) was observed with irrigation schedule I₃ but remained at par with I₂. Significantly lowest cane yield was recorded with I₁.

Interaction:-

Interaction effect of planting method and irrigation schedule was found significant. Almost all the treatment combinations remained at par with each other except P₁I₁ and P₂I₁

Number of millable canes per hectare: (NMC/ha)

The results are presented in Table 4a.

Planting method:-

Significantly the highest NMC/ha (123534 /ha) was noticed under the planting method P₃ while lowest number of millable canes was recorded with P₁.

Irrigation schedule (IW/CPE ratio):-

The data shown that, significantly the highest NMC/ha (12968 /ha) was noticed under the Irrigation level I₂ but remained at par with the level I₃.

Interaction:-

Interaction effect of planting method and irrigation schedule did not show any significant results.

C.C.S. t/ha:-

The results are given in Table 5a.

Planting method:-

Significantly the highest c.c.s. (19.02 t/ha) was recorded with planting method P₃ and remained at par with planting method P₂.

Irrigation schedule (IW/CPE ratio):-

Irrigation level I₃ recorded significantly highest c.c.s. (18.78 t/ha) and at par with I₂. Significantly lowest c.c.s. was observed under irrigation level I₁.

Interaction:-

Interaction effect of planting method and irrigation schedule show significant results in increasing CCS t/ha. The highest CCS t/ha recorded in P₃I₁ and remained at par with almost all the treatment combination except P₁I₁ and P₂I₁.

Quality parameters:-

The results are given in table 11.

Planting method:-

There was no significant difference due to various planting methods. However, planting methods P₃ and P₂ improved quality parameters compared to planting methods P₁.

Irrigation schedule (IW/CPE ratio):-

Irrigation levels did not show any significant results on quality parameters .While significantly lowest fibre % (14.65) recorded with irrigation schedule I₃ and at par with I₁.

Interaction:-

Interaction effect of planting method and irrigation schedule showed significant result on pol % juice.

In pol % juice, interaction effects of planting method (P) x irrigation schedule (I), was found to be significant. The highest pol % juice (20.84) noticed in P₃I₁ but at par with P₁I₃ and P₂I₃.

Field Water Use Efficiency:

Maximum FWUE was noted in the treatment I₁ (154.74 kg /ha.mm) followed by I₂ (119.32 kg /ha.mm) and I₃ (88.68 kg /ha.mm).

FORM – B

Name of the Coordinated Project: All India Coordinated Research Project on Sugarcane

Discipline : Agronomy **State** : Gujarat **Location** : Navsari
Year : 2011-2012 **Zone** : Peninsular

Trial series: AS 63: Plant geometry in relation to mechanization in sugarcane

General Information about the Trial:

- | | | | |
|------------|------------------------------------|---|---|
| 1. | Design of the experiment | : | Split plot |
| 2. | Number of treatment | : | 12 |
| | A. Plant geometry | | B. Variety |
| | P ₁ – 120 cm | | V ₁ – CoN 05071 |
| | P ₂ – 150 cm | | V ₂ – CoN 04131 |
| | P ₃ – 30:150 cm | | V ₃ – Co 86032 |
| | | | V ₄ – Co 99004 |
| 3. | No. of replications: | 3 | |
| 4. | Plot size : | | |
| (a) | Distance between rows | : | As per treatment |
| (b) | Length of rows in gross plot | : | 8m |
| (c) | No. of rows in gross plot | : | P ₁ :5, P ₂ :4, P ₃ :4 twin row |
| (d) | Gross plot size | : | 8.00 m x 6.0 m for P ₁ , P ₂ , P ₃ |
| (e) | Length of rows in net plot | : | 7m |
| (f) | No. of rows in net plot | : | P ₁ :3, P ₂ :2, P ₃ :2 twin row |
| (g) | Net plot size | : | 7.0m x 3.6 m – P ₁
7.0m x 3.0 m – P ₂ & P ₃ |
| 5. | Date of Planting | : | 11-12-2010 |
| 6. | Date of transplanting | : | Not applicable |
| | Seed rate | : | 50000 two eye bud sett/ha |
| 7. | Date of harvesting | : | 05-01-2012 |
| 8. | Crop grown in previous year | : | T. P. Paddy |
| 9. | Soil type | : | Heavy black soil |
| 10. | pH value | : | 7.72 |

**11. Soil fertility status at the time of :
planting**

Nutrient	Value	Status
Avail. N (kg/ha)	250.4	Medium
Avail. P ₂ O ₅ (kg/ha)	50.5	Medium
Avail. K ₂ O (kg/ha)	289	High

12. Fertilizer applied :

Nutrient	Basal	Top dressing
N	15 %	85% (in 3 splits)
P	100%	-
K	100%	-

13. No. of irrigation given : Irrigations were given at an interval of 3 weeks interval in winter and 2 weeks interval in summer

14. No. of weedings given : 2

**15. Other cultural operations measures:
adopted**

Interculturing	:	01-03-2011 and 10-04-2011
Ridging	:	15-05-2011

16. Plant protection measures adopted:

Pesticides / Fungicides	Dose	Date
1. Endosulphhan	21 ml/10 lit water	20-02-2011
17. Damage to the crop due to pest disease	:	No significant damage caused due to various pests and diseases.
18. Is the experiment reliable	:	Yes
19. Name of Co-operators	:	Ms. Darpana Patel
20. Signature of the Scientist in : charge of the experiment		
21. Name and designation	:	Prof. H.C. Patel Asst. Research Scientist

Location: Navsari

Year : 2011-12

Zone : Peninsular

Title: AS 63 Plant geometry in relation to mechanization in sugarcane

Table 1 - Mean data of Germination percentage (at 30 and 45 DAP)

Treatment	Germination (%) at 30 days after planting	Germination (%) at 45 days after planting
P ₁ V ₁	69.45	73.25
P ₁ V ₂	78.67	82.64
P ₁ V ₃	65.22	73.20
P ₁ V ₄	66.69	70.36
P ₂ V ₁	75.90	80.69
P ₂ V ₂	61.60	66.64
P ₂ V ₃	63.56	73.47
P ₂ V ₄	68.77	74.26
P ₃ V ₁	69.58	77.40
P ₃ V ₂	70.48	74.55
P ₃ V ₃	75.61	79.40
P ₃ V ₄	62.50	73.75

Results :-**1. Number of tiller at 90 days after planting (DAP) :-**

The Results are given in Table 1a.

Plant geometry:-

Various plant geometry treatments did not show any significant effect on number of tillers at 90 days after planting. However, highest number of tillers were recorded in plant geometry P₃.

Variety:-

Higher number of tillers (190145/ha) were recorded with the variety Co 86032 (V₃) being remained at par with CoN 04131 (V₂) and CoN 05071 (V₁).

Interaction:-

Interaction effect between plant geometry and varieties was failed to get the level of significance.

2. Number of tillers at 120 DAP

The results are presented in Table 2a.

Plant geometry:-

Plant geometry failed to get level of significance however highest and lowest number of tillers were recorded with P₂ and P₁ respectively.

Variety:-

Higher number of tillers were recorded with variety Co 86032 (V₃) and being at par with variety CoN 04131 (V₂).

Interaction:-

Interaction effects were found to be non significant.

3. Number of tillers at 180 DAP:-

The results are given in Table 3a.

Plant geometry:-

Various plant geometry treatments failed to get the level of significance. However, highest and lowest number of tillers was found in plant geometry P₁ and P₂ respectively.

Variety:-

Different varieties failed to show significant increased in number of tillers at 180 DAP.

Interaction:-

Interaction effects between plant geometry and varieties were found non-significant.

4. Plant height at 120 DAP

The Results are given in Table 4 a.

Plant geometry:-

Significantly highest and lowest plant height recorded with plant geometry P₁ and P₂, respectively.

Variety:-

Higher plant height (438.58 cm) was recorded with the variety Co 86032 (V₃) being remained at par with CoN 04131 (V₂) and CoN 05071 (V₁).

Interaction:-

Interaction effect between plant geometry and varieties was failed to get the level of significance.

5. Plant height at 180 DAP

The Results are given in Table 5a.

Plant geometry:-

Significantly highest plant height (451.56 cm) noticed with plant geometry P₁ (120 cm) over P₂ and P₃.

Variety:-

Variety (V₃) Co 86032 recorded higher plant height and being remained at par with CoN 04131 (V₂) and CoN 05071 (V₁).

Interaction:-

Interaction effect between plant geometry and varieties was not showing any significant increase in plant height.

6. Number of millable canes/ha

The Results are given in Table 6a.

Plant geometry:-

Significantly higher number of millable canes (114732.14/ha) were recorded with plant geometry P₁ which remained at par with plant geometry P₂.

Variety:-

Higher number of millable canes was recorded with variety (V₃) Co 86032 and remained at par with variety CoN 04131 (V₂) and Co 99004 (V₄).

Interaction:-

Interaction effect between plant geometry and varieties failed to get level of significance.

7. Plant length at harvest

The Results are given in Table 7a.

Plant geometry:-

Significantly higher and lower plant length recorded with plant geometry P₁ and P₂ respectively.

Variety:-

Higher plant length was recorded with variety CoN 05071 (V₁) and remained at par with variety Co 99004 (V₄).

Interaction:-

Interaction effect between plant geometry and varieties was found non significant in increasing plant length.

8. Plant girth at harvest

The Results are given in Table 8a.

Plant geometry:-

Higher plant girth was recorded with plant geometry P₁ (2.49) but remained at par with plant geometry P₂.

Variety:-

Significantly higher and lower plant girth was recorded with variety CoN 05071 (V₁) and CoN 04131 (V₂).

Interaction:-

Interaction effect between plant geometry and varieties was fail to get the level of significance for plant girth.

9. Cane yield**Plant geometry:-**

Higher cane yield (124.18 t/ha) was recorded with plant geometry P₁ (120 cm) and remained at par with plant geometry P₃ (30:150 cm) than P₂ (Table 9a).

Variety:-

Higher cane yield was recorded with variety CoN 05071 (131.14 t/ha) being at par with variety Co 99004 (V₄).

Interaction:-

Interaction effect between plant geometry and varieties did not show any significant improvement in cane yield /ha.

10. CCS t/ha

Plant geometry:-

Significantly highest and lowest CCS (16.92 and 16.07 t/ha) was recorded with plant geometry P₁ and P₂ respectively (Table 10a).

Variety:-

Higher CCS yield was recorded with variety CoN 05071 (18.54 t/ha) being at par with variety Co 99004 (V₄) and variety Co 86032 (V₃).

Interaction:-

Interaction effect between plant geometry and varieties fail to get level of significance.

11. Quality parameters

Plant geometry:-

There was no significant difference observed due to various plant geometry on quality parameters (Table 11-15).

Variety :-

Various quality parameters were significantly influenced due to different varieties. Higher CCS %, pol % juice and pol % cane recorded with variety CoN 05071 (V₁) and remained at par with variety Co 99004 (V₄) while purity % recorded higher with variety Co 86032 and remained at par with varieties CoN 05071 (V₁) and Co 99004 (V₄).

Interaction:-

Interaction effects of plant geometry and variety was failed to show the level of significance.

FORM – B

Name of the Coordinated Project : All India Coordinated Research Project on sugarcane

Discipline : Agronomy **State :** Gujarat **Location:** Navsari

Year : 2011-2012 **Zone :** Peninsular

Trial series: AS-64 Response of sugarcane to different plant nutrients in varied agro ecological situations

General Information about the Trial

1. Design of the experiment : R.B.D.

2. No. of treatments : 12

T₁ Control (No fertilizer)

T₂ N

T₃ NP

T₄ NPK

T₅ NPK + S

T₆ NPK + Zn

T₇ NPK + Fe

T₈ NPK + Mn

T₉ NPK + S + Zn

T₁₀ NPK + S + Zn + Fe

T₁₁ NPK + S + Zn + Fe + Mn

T₁₂ Soil test based fertilizer application

3. No. of replications : 3

Variety grown : CoN 5071

4. Plot size :

a) Distance between rows (cm) : 90 cm

b) Length of rows in gross plot : 8 m

c) No. of rows in gross plot : 5

d) Gross plot size : 8.00 m x 5.40 m

e) Length of rows in net plot : 4 m.

f) No. of rows in net plot : 3

g) Net plot size : 6.00 m x 2.7 m

5. Date of planting : 05-03-2011

- 6. Date of Transplanting** : Not applicable
7. Date of harvesting : 27-03-2012
8. Previous Crop grown : Sugarcane
9. Soil type : Heavy black soil
10. pH value : 7.75
11. Fertilizer applied:

Nutrient	Basal	Top dressing
N	15 %	85% (in 3 splits)
P	100%	-
K	100%	-

12. No. of irrigations given : 14 each of 8 cm depth
13. Date of Irrigation : Irrigation were given at an interval of 3 weeks in winter and 2 weeks in summer season.

14. No. of weedings given : 2 times
15. Other cultural operation measures adopted : Interculturing : 25.05.2011

16. Plant protection measures adopted:

Pesticides / fungicides	Dose	Date
1. Endosulfan	21 ml/10 lit water	16.05.2011

17. Damage to the crop due to pest and diseases:
No significant damage was observed due to various pest and disease.

18. Is the experiment reliable : Yes
19. Name of the Co-operators : Ms. Darpana Patel
20. Signature of Scientist of In charge of the experiment :

21. Name and Designation : Mr. H. C. Patel
Asstt. Research Scientist (Agro.)

Soil Analysis:

Parameter	Soil value
pH (1:2.5)	7.75
EC (1:2.5) dsm ⁻¹	0.34
Organic carbon (%)	0.45
Available N (kg/ha)	301
Available P ₂ O ₅ (kg/ha)	109
Available K ₂ O (kg/ha)	336
Available S (kg/ha)	37.44
Fe (ppm)	3.36
Mn (ppm)	27.42
Zn (ppm)	0.94

Application of Soil test based fertilizer:

1. N - Recommended dose (RD) of nitrogen only i.e 250 kg N/ha
2. P - Decrease RD by 50 % i.e 187.5 kg P₂O₅/ha
3. K - Decrease RD by 50 % i.e. 62.5 kg K₂O/ha
4. S - 83.86 kg/ha
5. Fe - 50 kg/ha
6. Mn - No Mn application
7. Zn - 8 kg/ha

Result:-

The data pertaining to cane yield, no. of millable canes/ha, tiller population, plant length, girth, quality parameters and nutrient status after harvest of sugarcane are presented in Table 1 to 24.

Number of millable canes (NMC/ha.):-

The data presented in (Table-1).

The higher no. of millable canes/ha (114815) was noticed under the treatment T₁₂ (soil test based fertilizer application). The lowest number of millable canes/ha (84156) was recorded in the control plot (T₁).

Plant height at 180 DAP:

The data presented in (Table-2).

Significantly highest plant height was recorded with treatment T₁₂ (soil test based fertilizer application) but it remained at par with treatment T₄, T₆, T₇, T₈ and T₁₀.

Tiller population:

The data presented in (Table-3-5).

There was no any significant difference observed due to various treatments in increasing tiller population at 90 and 120 days after planting (DAP). While at 180 DAP significantly higher tiller population was observed with treatment T₁₂ (soil test based fertilizer application) but it remained at par with treatment T₄, T₆, T₇, T₈ and T₁₀ and T₁₁.

Plant length and girth at harvest:

The data presented in (Table-6 to 7).

Significantly higher and lower plant length was recorded with treatment T₁₂ (soil test based fertilizer application) and T₁ (control).

Plant girth failed to get the level of significance.

Cane yield (t/ha):-

The data presented in table 8.

Cane yield (t/ha) was influenced significantly by various nutrient management treatments. Significantly higher cane yield (133.33 t/ha) was recorded with the treatment T₁₂ (soil test based fertilizer application) followed by the treatment T₆ (NPK +Zn) as compared to other treatments.

C.C.S. t/ha:-

The data presented in table 9.

C.C.S. (t/ha) was significantly influenced by various plant nutrients treatments. Soil test based fertilizer application (T_{12}) recorded higher CCS (18.38 t/ha) followed by treatment T_4 (NPK kg/ha). The lowest C.C.S. (t/ha) was recorded under control plot (T_1).

Quality parameters:-

The data presented in table 10-14.

Various quality parameters *viz*; c.c.s %, pol% juice, purity %, and pol % cane were not found significant due to various treatments of plant nutrients.

Soil nutrient status after harvest of crop:

The data presented in table 15-24.

Soil pH, Ec, O.C.% and nutrient status- available P_2O_5 , K_2O , S, Fe, Mn and Zn was not significantly influenced due to various nutrients. However, available N recorded significantly higher with the treatments T_4 and remained at par with almost all the treatment except treatment T_1 , T_7 , T_9 and T_{12} .
